**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Regarding claim 2, the phrase "and the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "and the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1- 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blackburn (US5285050) in view of Gustavsson et al. (US5643480).

Blackburn discloses a battery powered lighter (Fig. 1-17) comprising: a thin flat case; a battery (32) provided within the flat case; a resistance wire heating element (40) connected to the battery; and a power switch (16, 16A, 76) for opening and closing

the connection between the battery and the resistance wire heating element; wherein the flat case comprises: an ignition window (14), open at a position where the heating element faces; a slide member (62,82) for opening and closing the ignition window; and an operating button (16, 16A, 76) for operating the power switch; an operation of the operating button is precluded in the state that the ignition window is closed by the slide member, by a portion of the slide member being interposed between contacts of the power switch; and the power switch is capable of being closed and activated by an operation of the operating button, in the state that the ignition window is open.

Blackburn disclose conventional A, A batteries or other suitable equivalent but silent with respect to a sheet type battery.

Gustavsson et al. discloses an electric heating device (34) comprising a sheet type battery (45) which is not much thicker than normal letter paper to provide power (column 4, lines 1-10).

It would have been obvious to one of ordinary skilled in the art at the time of invention is to provide a sheet type battery in order to provide save space because of paper size as taught by Gustavsson for the battery powered lighter of Blackburn.

With respect to claim 2, Blackburn discloses a battery powered lighter comprising: a display portion for an advertisement provided on a flat surface (20, 22) of the flat case.

With respect to claim 3, Blackburn discloses a battery powered lighter wherein: an operating portion of the slide member (62) and the operating button (16, 16A) are positioned adjacent to each other on the flat case.

With respect to claim 4, Blackburn discloses a battery powered lighter wherein: a fixing portion (column 1, line 49-56, column 3, lines 30-35, claim 1) of the resistance wire heating element is structured of heat cured resin.

With respect to claim 5, a battery powered lighter wherein: the sheet type battery is irreplaceably housed within the flat case, so that the lighter is disposable, if user do not open the battery compartment battery is irreplaceable and the lighter is disposable if user desired to dispose the lighter.

With respect to claim 6, a battery powered lighter as wherein: a portion of the flat case is openable and closable; and the sheet type battery is replaceably housed therein.
